

OFFSIGHT PROJECT MANAGEMENT SOFTWARE

Factory Quality Tracking & Reporting

The rapid rise of offsite and modular construction across multifamily, commercial, affordable housing, workforce housing and hospitality projects have shifted work from the traditional construction jobsite to the factory. With this process shift and move to modular, owners and project stakeholders are increasing their expectations around managing production quality and reporting at the factory level. In this case study, we walk through how industry leaders leverage [Offsight](#) to track factory quality and manage crucial internal and third-party reporting.

Digitize Your Entire Quality Process

Our platform allows our customers to build and customize a variety of quality checklists and digital travelers that match their production process. They can identify key process steps in the assembly process and associate a quality workflow with each specific type of modular product they're assembling. Checklists can be built to match third party or State mandated audit forms and inspections including **The Department of Housing and Urban Development (HUD) Inspection Checklist**. Operators, quality inspectors and team leads can then access these digital checklists and travelers on the factory floor at various workstations or through our mobile apps.

End-to-end Quality Traceability for All Modules

“ Offsight provides an easy and effective way to track production progress on our modular factory floor across multiple locations. With projects running simultaneously across the country, Offsight helps bridge the important communication gap between different project stakeholders and ensures all issues are resolved in a timely manner and schedule dates are achieved.

Plant Manager

Live Production Progress Tracking

Offsight allows managers to track real-time production progress and pending quality issues directly from the floor. These panel dashboards provide internally teams with valuable and actionable insights during daily and weekly standup meetings. This data is exportable for internal and external progress reporting to ensure that all parties and team members are on the same page and to ensure that no crucial quality issues or production roadblocks impede delivery.

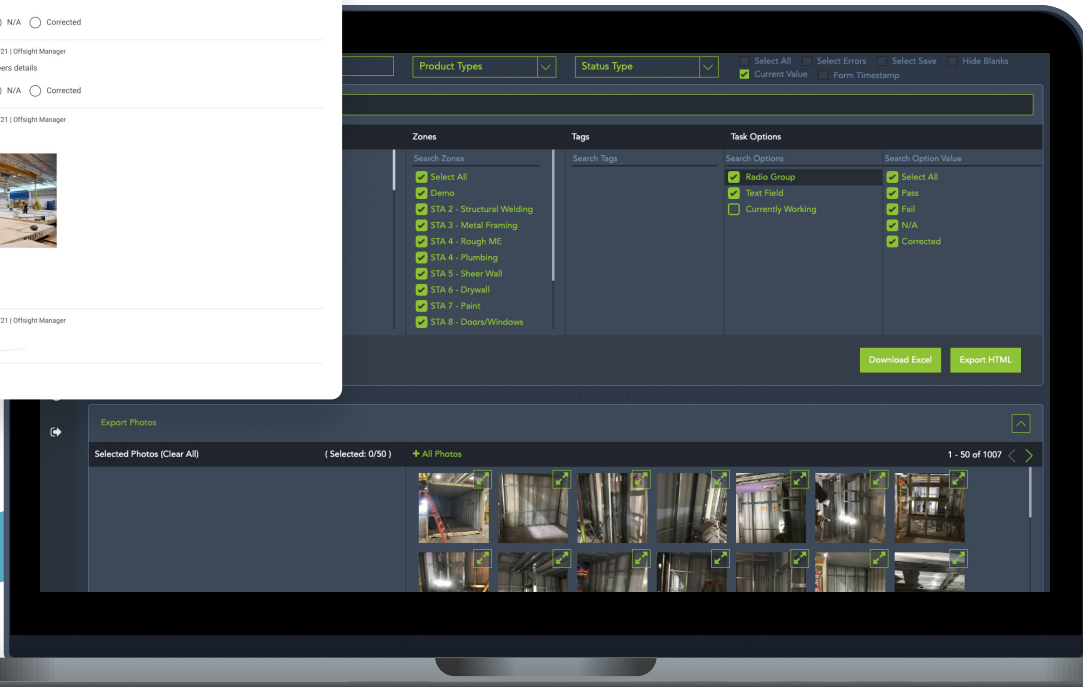

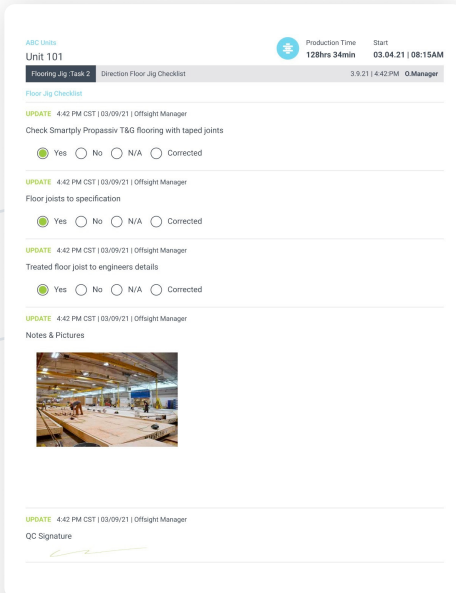

Tracking Performance with Analytics Reports

Offsight's robust **Analytics Dashboard** allows managers to continuously track and improve production performance. Managers can track daily, weekly, monthly or quarterly quality and production data across all live products and projects to diagnose problems and make data-driven decisions. Simply drag and drop to create robust analytics views with charts and tables that can be customized and accessed in real-time in the **Offsight Desktop Console**. The raw data can also be exported in CSV format for additional integrations with other analytical tools.

Robust Reporting for Owners and Quality Inspectors

Offsight's **Reporting Tab** allows users to create completely customizable reports including mass photos downloads for key executive stakeholders, owners and third party inspectors. Executives can track progress and report production status across multiple factories, production lines and projects with our simple tool. Customers can set **User Group Access** parameters to allow third party inspectors and owners to access data for specific projects and schedule data exports to analytics tools.
